PlastikGas® Genesis Innovation Center

Tampico, Tamaulipas, Mexico

A 14-slide investor pitch deck written to raise $500,000 for the commissioning of a plastic-to-fuel plant.

Plastic Waste Crisis 2024

In 2024, 220 million tons of plastic waste will be created. And nearly 70 million tons of it will pollute nature due to mismanagement.

Since 2021, plastic waste has risen by 7.11%.

We must act now to reverse this alarming trend because our planet cannot sustain this level of plastic pollution for much longer.

Plastic Overshoot Day: September 5th, 2024

The day plastic waste exceeds global management capacity is September 5th of this year.

We are drowning in plastic, and time is running out.

Urgent action and new technology are needed to push back this catastrophic date and save the planet.

PlastikGas® Proprietary Technology

PlastikGas® has developed a groundbreaking technology that converts plastic waste into six of the most commonly used fuels on the planet.

Our process is efficient and environmentally friendly.

How It Works

We convert plastic waste into high-octane gasoline, diesel, paraffin, petroleum, liquid gas, and coke (a high-intensity burning coal) with a multi-step process: transformation, condensation, vapor fuel burner, and storage.

With PlastikGas® technology, we can do better than just delaying Plastic Overshoot Day. We can start to reverse the plastic pollution crisis altogether.

The Beginning of Something Big

PlastikGas® has successfully operated five demonstration plants worldwide.

These plants have proven the potential of our plastic-to-fuel conversion technology.

Our Upscaled 7-Ton Plant

Ten clients have expressed strong interest in purchasing PlastikGas® plants.

These clients are waiting to see the 7-ton plant in operation before committing.

There is the potential to generate $400 million in sales upon successful demonstration of the 7-ton plant.

The Final Stretch

The 7-ton plant is built and in place, but requires final calibration and implementation to become fully operational.

Completing this last leg of the project is critical to showcase the technology to potential customers.

Unlocking the $400 million in potential sales hinges on successfully demonstrating the 7-ton plant's capabilities.

Instant Revenue Generation

There is an extremely high and increasing demand for gasoline and diesel products across every industry.

The 7-ton plant will be operating for profit and will immediately start generating revenue by selling the fuel produced by our plastic conversion process.

Technology Licensing

In addition to selling fuel, PlastikGas® licenses its proprietary technology to clients.

This creates a recurring revenue stream, similar to a franchise model.

Clients pay ongoing fees to use the groundbreaking PlastikGas® technology.

Diversification of Revenue Streams

By combining fuel sales, plant sales, and technology licensing, PlastikGas® creates a steady flow of income.

Recurring revenue from licensing provides a predictable income stream and will increase the company's valuation.

This diversified revenue model reduces dependence on one-time sales and helps protect your investment.

Environmental Impact

PlastikGas® technology not only reduces plastic waste but also decreases greenhouse gas emissions associated with plastic decomposition.

By converting plastic waste into usable fuels, we create a circular economy and reduce the demand for fossil fuels.

Our solution contributes to restoring ecological balance, protecting marine life, and creating a sustainable future.

What We Need From You

PlastikGas® is seeking $500,000 in exchange for a 10% share of the profits generated by the 7-ton plant in Tampico, Mexico.

Funds will be used to calibrate the plant, purchase plastic feedstock, pay engineers, and cover travel expenses for commissioning.

A Once-in-a-Lifetime Opportunity

The groundbreaking PlastikGas® technology represents a paradigm shift in the energy and waste management sectors.

Our solution has the potential to disrupt the global energy landscape and create a new, sustainable industry.

As an early investor, you will be part of a select group who recognized the immense potential of PlastikGas® from the very beginning.

Your early support will be instrumental in shaping the future of the company and the industry as a whole.

Secure your position as an early investor in the answer to Earth's energy and plastic crises.
