Script: Good vs Great PowerPoint

Presentation Script (Aptica, LLC-Jason Newburg)

Slide 1:

Hi everybody, welcome to the webinar! We're thrilled you could join us today.

Let me start off by painting a picture for you: It's Monday morning, and you've just walked into the office. You grab your coffee, sit down at your desk, and... nothing. Your computer won't login. You check with your coworkers, and they're all facing the same issue. The entire system is down. Emails are bouncing back, important files are inaccessible, and your team is twiddling their thumbs.

If you've been through this or something similar, think back to that moment. How did your IT provider respond? How quickly did they show up to start fixing things?

When they did arrive, did they seem prepared with a plan of action, or were they just as flustered as everyone else?

Whether you've already encountered this scenario or you've been fortunate so far, the reality is it's not a question of if, but when it will happen.

Slide 2:

During this webinar, we're going to explore what an IT service provider does, the real benefits of having one as a partner, and, most importantly, what sets a good IT provider apart from a great one.

By the end of this session, you'll understand that having just a good IT partner isn't enough—in fact, it can actually be incredibly risky.

Slide 3:

So, what is an IT service provider? Think of them as your external IT department. They handle everything from managing your network and systems to providing support and keeping your technology up-to-date. They help keep your business running smoothly, protect your data from threats, and make sure your team has the tools they need to be productive.

Simply put, an IT service provider is there to make sure your technology works for you, not against you.

Slide 4:

So, what can go wrong with your IT systems? Unfortunately, the answer is a lot, and when it does, the impact on your business can be huge.

First up, **cybersecurity threats**. We've all heard the horror stories, but let me give you a recent example—the CrowdStrike mishap. Despite being a huge cybersecurity company, a flawed update in their Falcon platform caused a massive IT outage, crashing millions of Windows systems worldwide. Essential services like airlines and hospitals were disrupted. This incident cost businesses billions and showed how vulnerable even the most secure systems can be.

Then there's **system downtime**. Imagine your entire operation coming to a screeching halt because your systems are down. No work gets done, customers get frustrated, and you're losing money by the minute.

And what about **data loss**? Whether it's from a cyberattack, hardware failure, or just plain human error, losing your data can be catastrophic. Without proper backups, you could lose everything—client records, financial info, the works.

Now, let's talk about outdated **technology**. If you're running on old software or hardware, you're not just slowing down your team—you're also opening yourself up to security risks. Plus, outdated tech can cause all sorts of compatibility issues and make your life a lot harder than it needs to be.

We can't forget **compliance issues**. If your IT systems aren't up to industry standards, you could be facing hefty fines or even legal trouble. And often, businesses don't even realize they're out of compliance until it's too late.

Lastly, there's **poor system integration**. When your IT systems don't talk to each other properly, it creates all kinds of headaches—errors, duplicate work, and missed opportunities.

These are just some of the things that can go wrong. But here's the good news: A great IT service provider like Aptica can help you avoid all of these issues so you can keep your business running smoothly, no matter what.

Slide 5:

So, how can a strategic partner like Aptica LLC help protect your business from these risks?

First, we focus on **aligning your technology with your business goals**. We don't just throw tech at problems—we make sure it's actually helping you achieve your goals.

Next, we focus on **efficiency**. We simplify your IT setup to remove bottlenecks and make everything run smoother. Your team can work better and faster, which helps your business operate more

smoothly.

When it comes to **making decisions**, having the right data is key. We provide tools that give you real-time insights so you can make informed choices based on facts, not just gut feelings.

Innovation is essential for staying ahead. We help you keep up with the latest tech, so you're always ready to adapt and bring new ideas to the table.

As your business grows, you need **scalability and flexibility**. With Aptica, your IT solutions grow with you, adapting to whatever changes come your way.

Security and risk management are huge priorities. We put strong protections in place to keep your data and systems safe, so you can focus more on your business without worrying about threats.

We're also committed to **keeping your systems up-to-date**. Technology moves fast, and we make sure your setup doesn't fall behind. Your systems will stay current and ready to support your business as it grows.

Finally, we offer budgeting services that help you get the best value out of your IT investments by recommending smart, cost-effective solutions that meet your needs.

With Aptica as your partner, your IT setup won't just keep up—it will actively push your business forward in every way possible.

Slide 6:

Slide 7:

Now let's talk about the difference between a good IT service provider and a great one.

A good provider **reacts** to issues as they come up. If something breaks, they fix it. But a great provider is **proactive**—they're not just waiting for things to go wrong. They're planning ahead, aligning technology with your business goals, and putting solutions in place before problems even arise.

Now, think about the services you're getting. A good provider might offer you a **basic package**—a one-size-fits-all deal that doesn't really take your specific needs into account. But a great provider **customizes** their services to fit your business. They make sure everything is just right for you, with the flexibility and scalability to grow as you do.

And then there's the way they talk to you. A good provider might throw around a lot of **technical jargon** that leaves you scratching your head, wondering what they're even talking about. A great provider, on the other hand, uses **simple language**. They explain what they're doing in a way that makes sense, so you're always clear on how their work benefits your business.

When it comes to solutions, a good provider might give you something that works but doesn't really **integrate** with your other systems. A great provider makes sure everything **fits together** seamlessly.

to boost your business's protection and efficiency.

Here's a big one: focus. A good provider might be more **focused on their own profit**, rather than what you actually need. But a great provider is **focused on you**—making sure the technology truly aligns with your business goals.

And what about response time? A good provider might get back to you when it's convenient for them. But a great provider is **responsive**—they're there when you need them, handling issues quickly and reliably.

Finally, think about the reports you get. A good provider might send you **complicated reports** full of technical details that only focus on what's been fixed. But a great provider gives you **clear, easy-to-understand reports** that show you real results—like how much risk has been reduced and the return on your investment.

Slide 8:

So, what makes a great IT service provider different from a world-class one like Aptica LLC?

First, **we want to understand your story**. We're not just here to fix problems or install new systems. We want to know where your business has been and where you're headed. Your goals, your challenges, your vision for the future—all of it matters to us.

Next, **we take the time to really understand how you work**. We dive into your workflow and processes to see how you operate day to day. Every business is unique, and we believe your IT should reflect that.

Finally, **we create a strategic plan that aligns technology with your vision**. We don't believe in one-size-fits-all solutions. Instead, we craft a plan that's specifically designed to make your technology complement the goals you've set for your business.

Slide 9:

We've talked today about what sets a great IT service provider apart and how a world-class partner like Aptica LLC can truly make a difference for your business.

Now, it's time to take what we've discussed and turn it into action.

We're offering a **FREE 30-minute consultation** with our team at Aptica LLC. This is a no-obligation opportunity for us to understand your business better and for you to see how we can help.

During this consultation, we'll explore your goals, review your current IT setup, and find ways to make your technology work even better for you.
